*Allowable Subject Matter*

1. The following is an examiner's statement of reasons for allowance:

Claims 1, 2, and 4-19 are drawn to a method of generating a dither matrix for an output device having sub-pixel addressability. Independent claims 1, 10, and 15 identify the uniquely distinct feature of "generating a dither output on the super-resolution grid [i,j]; converting the dither output [i,i] to an effective response on the sub-pixel grid [m,n]; and using the effective response to modulate the addition or deletion of tone of at least one sub-pixel." The closest prior art, Lin et al. (US 5742703 A) teaches generating a dither matrix using a super resolution grid, but does not teach or suggest converting the super resolution grid to an effective response on a sub-pixel grid. Lin, either singularly or in combination with other cited references, fails to anticipate or render the above underlined limitations obvious.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

*Conclusion*
